435 - Non Overlapping Intervals

- Min number of overlap to remove for 0 overlap

BF: For every member of the array choose to keep/remove + check if it works

TC: $O(2^n)$

⓪ Sort by start time

] This one ends after, remove this one

[1, 2] prev_end = 2

[1, 3] prev_end = 2 res = 1

[2, 3] 3

[3, 4] 4

① Iterate through the array comparing the current interval to the current ending of the processed non-overlapping intervals

```
prev_end > start:
    res += 1
    prev_end = min(prev_end, end)
else:
    prev_end = start
```
