39. Combination Sum

0	2	4	6
~~0~~	2	2	2
		2	2
			2

7 // 2 = 3

2	4	5	6	7
2	2	2	2	2
	2	3	2	2
			2	3

Base Case:

0 -> []

combos [[2, 2, 3], ...]

dp[combo_sum: int] -> List[int]

```
for n in nums:
    new_entries = dict()
    for v, combos in dp:
        for combo in combos:
            mult = 1
            while v + mult · n <= target:
                new_entries[v + mult · n].append(combo +
                                                 [n for _ in range_mult])
    add new_entries to dp
return dp[target]
```
