

875. koko Eating Bananas

piles: list[int] Each hour, koko chooses a pile of bananas and eats k

h : int bananas

If a pile has $< k$ bananas, koko eats that pile and no more.

Solve for min k (eating speed / h) such that koko finishes within h hours

[3, 6, 7, 11] $k \in [1..11]$
 $[1..max(piles)]$

0 1 2 3 4 5 6 7 8
1 2 3 4 5 6 7 8 9

k can be a min

l m r
 l m r
 l m r
 l m r
 l m r

if $nums[m]$ works:

$$r = m$$

elif $nums[m]$ not work

$$l = m + 1$$
