525. Contiguous Array

max_len of a contig array of 0 and 1

1 2 3 4

$O(n^2)$ BF

0 1 2 3 4 5 6 7

0 0 1 1 1 0 0 0

To determine the answer at i=7, we had to remove a prefix

0 0 1 1 1 0 0 0

prefix + suffix = s[: i + 1]

- If at every point we compute s[: i + 1]

  suffix = 0

- 2 = s[: i + 1]

- 2 = prefix

	x				x		
0	1	2	3	4	5	6	7
-1	-2	-1	0	1	0	-1	-2
0	0	1	1	1	0	0	0

-1 -> 0
-2 -> 1
0 -> 3
1 -> 4

x = we want the smallest possible occurrence,

⓪ Calculate s[: i + 1]

1 -> +1
0 -> -1

① Save it in delta -> idx map (IF no earlier prefix)

② A candidate is found when

delta(s[: i + 1]) in map
delta -> pick

suffix = 7 - 1
incl excl
[2: 8]
[prefix_end + 1 : i]
