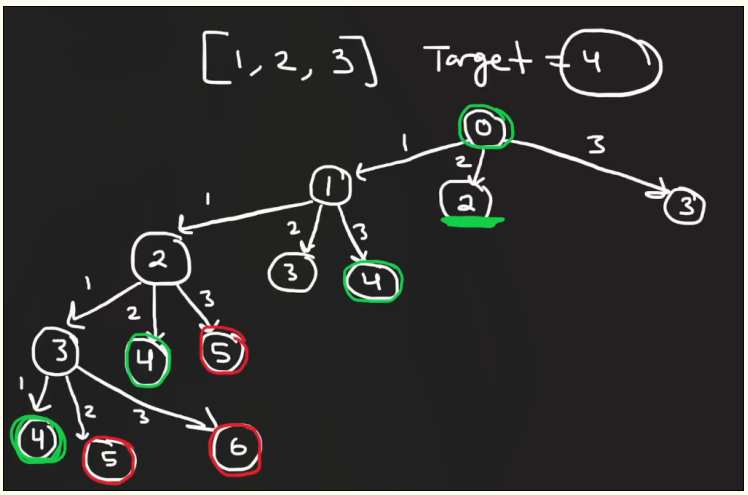
377- Combination Sum IV



dp(i) = how many combinations can I make from i to sum to target

Solve for dp(0)

$$dp(x) = \begin{cases} x == target \rightarrow 1 \\ x > target \rightarrow 0 \\ _ \rightarrow \text{sum} \begin{cases} dp(x + A_0) \\ dp(x + A_1) \\ \dots \end{cases} \end{cases}$$
