417 - Pacific + Atlantic Water Flow

Pacific ⌈ Rainwater flows if neighboring cell heights are <= the cell.

Atlantic ⌋

P: Return all (r, c) tiles that can reach both oceans

Approach either

- from the tiles to reach the ocean
- from the ocean ✓

interacts w/ only the relevant tiles

A tile that can reach tile DEST

tile.height >= dest.height

```
dfs(dest_height: int,
    i: int,
    j: int) -> int
    if OOB or A[i][j] < dest.height or visited[i][j])
        return
    visited[i][j] = True   ← conv to set
    for rd, cd in ((0,1), (0,-1), ...):
        dfs(A[i][j], i + rd, j + cd))

for i, j in atlantic:
    dfs(float('inf'), i, j, atl_visited
```

] same for pacific

and both

return format lc judge expects
